

When landscaping be careful of pedestrians and keep the sidewalk and road open at all times. Instruct your landscape suppliers and contractors to deliver and pile materials on your property. The street and sidewalk are not allowed to be used as storage and staging areas for your landscaping project. If the you feel you need to use the road or sidewalk, you must obtain a Encroachment Permit from the City. 801-208-3195

Keep the road and sidewalk clean at all times. Use a broom and shovel and do not hose down the road with water. Prevent track out by scraping or washing mud from tires before using the roads. This is easier then removing tracked out mud from the road with a square-nosed shovel and broom. Manage dust by keeping the bare dirt and stockpiled materials moist.

Following these landscaping practices will help prevent accidents, minimize the nuisance of construction activities, and protect our streams, rivers and storm drain system from dirt and other construction-related pollutants. These practices are also necessary for compliance with City ordinance and State Law.
