Mr. Pete Stasiak  
City Manager  
City of McAlester  
28 E. Washington  
McAlester, OK 74501

Dear Pete:

We have prepared the accounting information that will be required under newly released GASB Statement No. 67, Financial Reporting for Pension Plans, and Statement No. 68, Accounting and Financial Reporting for Pensions. Note that GASB 67 amends GASB 25 and covers accounting for the plan and GASB 68 amends GASB 27 and covers accounting for the City, as plan sponsor.

The effective date for GASB 67 is for fiscal years beginning after June 15, 2013, so the first financial statements that would actually reflect the new standards of GASB 67 for the plan will be those prepared for fiscal year ending June 30, 2014. The effective date for GASB 68 is one year later, for fiscal years beginning after June 15, 2014, so the first financial statements that would actually reflect the new standards of GASB 68 for the City will be those prepared for fiscal year ending June 30, 2015. To help with the transition, we have prepared exhibits in this report showing appropriate information under GASB 25, GASB 27, GASB 67, and GASB 68.

Our calculations shown in this report are based on the census data, actuarial methods, procedures, and assumptions shown in the plan's actuarial funding report as of July 1, 2014, unless otherwise specifically noted.

We would be pleased to respond to any questions regarding the information contained in this report and to provide explanation or further details as may be appropriate.

Respectfully submitted,

Note that the AAL amounts shown above prior to 07/01/2013 were determined based on the Projected Unit Credit funding method, which was permissible under GASB 25 & 27, but is not suitable for disclosure under GASB 67 & 68 since the new Statements require the use of the Entry Age Normal funding method.

### Schedule of City Contributions under GASB 25

<u>Plan Year Ending</u>	<u>Annual Required Contribution "ARC" (end of year)</u>	<u>Percent Contributed*</u>
06/30/2007	527,460	79.0%
06/30/2008	548,804	96.7%
06/30/2009	535,657	112.6%
06/30/2010	674,662	100.0%
06/30/2011	821,436	99.1%
06/30/2012	885,271	100.0%
06/30/2013	931,814	94.1%
06/30/2014	507,902	114.2%
06/30/2015	489,408	TBD

Note that our annual actuarial reports show the development of the ARC amounts shown above. The ARC amounts are based on the methods and assumptions shown in these reports, which include the use of a 7.2% interest rate since 07/01/2009 (8.0% prior to 07/01/2009). Our calculations provide that gains and losses are amortized over a closed period or 30 years, based on when they arose. It is our understanding that the City plans to make at least the minimum contribution so determined each year until the plan is fully funded on an ongoing basis.

\* Percentages shown are unadjusted for interest earned.

Summary of Significant Accounting Policies

Method used to value investments: Market value (fair value).

Plan Description

Plan provisions are summarized in the separate Actuarial Funding Report as of July 1, 2014.

Actuarial Assumptions and Methods

The pension liability was determined based on actuarial assumptions and methods summarized in the separate Actuarial Funding Report as of July 1, 2014. Note that GASB 67 requires the use of the Entry Age Normal actuarial cost method. Since this plan has been frozen, the method used for funding shown in the Actuarial Funding Report generates the same pension liability as the Entry Age Normal method.

Investment Policy and Long-Term Expected Rate of Return

The plan's policy in regard to the allocation of invested assets is established by the City Council. The current asset allocation policy is 70% equity investments, 25% fixed income investments, and 5% cash. The long-term expected rate of return on pension investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each asset class. These ranges are combined to produce the long-term expected rate of return by weighing the expected future real rate of return by the target asset allocation percentage and by adding expected inflation. Best estimates of geometric real rates of return for each major asset class included in the pension plan's target asset allocation as of June 30, 2014 are summarized in the following table:

Asset Class	Target Allocation	Long-Term Expected Real Rate of Return (Includes Inflation)
Domestic equity	55%	4.9%
International equity	15%	1.2%
Fixed income	25%	1.0%
Cash	5%	0.1%
Total	100%	7.2%

The City has, on average, made contributions that exceed the ARC over the least five years. If the City continues to contribute in this fashion, the plan will always be sufficiently funded to pay benefits due.

Discount Rate and Sensitivity of the Net Pension Liability to Changes in the Discount Rate

The discount rate used to measure the total pension liability was 7.2%, which is the same as the long-term expected rate of return on pension plan investments applied to all periods of projected benefit payments. The following presents the net pension liability calculated using the discount rate of 7.2%, as well as what the plan's net pension liability would be if it were calculated using a discount rate that is 1% lower (6.2%) or 1% higher (8.2%) than the current rate:

	1% Decrease (6.2%)	Current Discount Rate (7.2%)	1% Increase (8.2%)
Total pension liability	18,480,207	16,609,575	15,038,314
Net position	13,888,777	13,888,777	13,888,777
Net pension liability	4,591,430	2,720,798	1,149,537
